HIRING MANAGER

La Fosse

Dear Hiring Manager,

I am excited to apply for the Senior Machine Learning Engineer role with your client. As an AI Engineer specializing in Computer Vision and Robotics, my experience strongly aligns with your client's goals in advancing cutting-edge AI-driven solutions within the professional sports industry.

At Esbaar, I led multinational teams and collaborated closely with leadership, marketing, and product teams to deliver advanced AI solutions for the Oil and Gas sector in Oman. My responsibilities included end-to-end development of computer vision and temporal prediction systems, covering requirements analysis, software architecture design, and hands-on customer deployment and validation. Additionally, I developed custom YOLOv5 models and implemented time-series prediction algorithms, directly enhancing operational safety and efficiency.

In my previous role as Lead Software Engineer at LivNSense Technologies, I guided a team of four engineers in developing ViCAS, an innovative AI-driven vision-based collision avoidance system. Through meticulous dataset curation, Intel OpenVINO model optimization, and advanced mixed-precision quantization techniques, we successfully achieved a 72% reduction in inference latency, enabling real-time detection and prevention of OSHA safety violations in high-risk environments.

I am particularly inspired by your client's commitment to leveraging advanced machine learning in professional sports. The opportunity to apply my expertise in computer vision and predictive analytics to enhance athletic performance and team strategies resonates deeply with my passion for innovation.

I would welcome the chance to discuss how my background aligns with your client's strategic objectives and how my skills can contribute to their continued success.

Thank you for considering my application. I look forward to speaking with you soon.

Sincerely,

Dexter Fernandes
