Computer Vision Engineer

I have spent 3.5 years collaborating with cross-functional teams, to ship computer vision solutions on the edge for clients that include British Petroleum and Austin Industries. I own the full-stack: handle large datasets with DVC, build models with PyTorch, track experiments with MLFlow and deploy via Azure. As of June 2025, my systems monitor safety and productivity on construction sites in Texas and on-shore oil rigs in Oman, boosting detection accuracy by 15%.

WORK EXPERIENCE

Esbaar • Muscat, Oman

01/2023 - 08/2023

AI Engineer

- Developed time-series machine learning models for the classification of on-shore oil rig operations to increase worker safety and reduce supervision required during 24/7 operation, achieving a 23% higher F1 score than human experts.
- Built an automated sensor-data cleansing pipeline (3.6 M data points) that cut model roll out from 3 days to less than 24 hours.
- Led strategic MLOps initiatives to continuously enhance experimentation and deployment workflows through bayesian hyperparameter tuning of time-series and vision models.
- Spearheaded the end-to-end development and production rollout of YOLOv5 models, to elevate rig worker and equipment detection precision by 15% in 3 months.
- Refactored a monolith into a Kafka-driven microservice architecture, enhancing failure isolation and improving MTBF by 35% within 4 months.
- Designed a dynamic memory management solution to address recurring crashes in a live video streaming system, reducing crash frequency by 67%.
- Participated in formal peer code reviews and quality-assurance activities, ensuring best practices for deliverables.

LivNSense Technologies Pvt. Ltd. • Bengaluru, India

05/2020 - 12/2022

Lead Software Engineer - AI

- Led a 4-engineer team to deliver ViCAS, enhancing model accuracy and reducing false positives by 33% through effective framing and edge-case resolution within 6 months.
- Implemented real-time object tracking with YOLO-DeepSORT, maintaining consistent identities across frames and enabling reliable downstream analytics.
- Deployed quantised OpenVINO vision models over Microsoft Azure to rugged Intel VPU edge devices for on-site inference in harsh industrial environments.
- Repurposed legacy object detection models for automated labelling pipeline workflows, reducing manual annotation effort by 80% and accelerating dataset curation.
- Engineered synthetic training data pipelines using OpenCV and NumPy, reducing edge-case model development time from 6 days to 2 days for high-risk production environments.

EDUCATION

Master of Science in Robotics

University of Bristol • Bristol, England

09/2023 - 09/2024

Bachelor of Technology in Electrical and Electronics Engineering

Visvesvaraya National Institute of Technology • Nagpur, India

07/2016 - 05/2020

SKILLS

- **Perception & Robotics:** LiDAR SLAM, Nav2, OpenCV, OpenVINO, PyTorch, ROS2, Sci-kit Learn, TensorFlow, Vision Transformer (ViT), YOLOv5/v8
- **Backend & Cloud / Edge:** AWS, Azure IoT Hub, C++, FastAPI, Intel VPU, NVIDIA Jetson AGX, PostgreSQL, Python 3
- **DevOps & MLOps:** Docker, DVC, Git, Linux, MLFlow, Optuna
