Hiring Manager
Dexory
Wallingford

Dear Hiring Manager,

I am applying for the Autonomy Engineer (LiDAR Perception) role at Dexory. I am a Robotics and Computer Vision Engineer with over three years' experience delivering real-time perception and SLAM systems in safety-critical industrial and field environments. I recently developed a LiDAR-only RTAB-Map SLAM pipeline using a Velodyne VLP-16 on a Husky UGV platform for my MSc dissertation. In the past, I have deployed edge-optimised perception systems to operational oil and gas sites. These projects strengthened my ability to design robust autonomy software that performs reliably in challenging, real-world conditions.

Dexory's ambition to scale a ROS2-based autonomy stack across a rapidly growing fleet strongly resonates with me. I am particularly drawn to the challenge of building deployable, maintainable LiDAR odometry and SLAM capabilities that can be rolled out every two weeks with minimal on-site customisation. My experience with ROS2, LiDAR SLAM, point-cloud processing (Open3D, PCL), containerised deployments, and performance-critical edge optimisation positions me well to contribute to Dexory's autonomy stack as it scales to hundreds of robots in dynamic warehouse environments.

I would welcome the opportunity to contribute to Dexory's mission and help strengthen the reliability and scalability of your LiDAR perception and SLAM systems. Thank you for considering my application. I look forward to the opportunity to discuss the role further.

Sincerely,
Dexter Fernandes
